-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### DETAILED ACTION

Applicant's request for reconsideration of the election requirement of the last Office action is persuasive and, therefore, the election requirement is withdrawn.

#### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bilek (US 6 601 528) in view of Ejima (US 4 377 203). Bilek discloses an intercooler with a plurality of cooling passageway located with a gas passageway for cooling intake gas for an internal combustion engine (See Fig. 27). However, Bilek does not show the use of a plurality of cooling tubes formed a portion of the body and at least partially surround the gas passageway. Ejima shows that the provision of a plurality of cooling tubes (46) formed a portion of the body and at least partially surround the gas passageway is old and well known in the art. A means for plate (48) is provided. Since the prior art references art from the same field of endeavor, the purpose disclosed by Ejima would have been recognized in the pertinent art of Bilek. Therefore, it would have been obvious at the time the invention was made to a person having ordinary skill in the art to provide the device of Bilek with cooling tubes formed a portion of the body and at least partially surround the gas passageway as taught by Ejima. Regarding claimed particular location for the inlet and the outlet for the cooling tubes, the provision of wire gauze and the flow director

surface, it would have been considered to be an obvious choice of mechanical design because one skilled in this art is familiar with basic fluid mechanic and normally has the laboratory test facilities. To optimize or select the suitable location for the inlet and the outlet for the cooling tubes, the provision of wire gauze and the flow director surface would be within the ability of ordinary skilled in this art.
